

MAGNUS CONVEYOR

Autonomous Material Flow for Warehouses & Factories

AUTONOMOUS MATERIAL HANDLING SOLUTION

An intelligent, flexible, and scalable autonomous conveyor robot designed to optimize material flow and improve operational efficiency across your facility

Seamless integration with
MES, ERP, and WMS

SPECIFICATIONS

01 Seamless Material Flow

Enables smooth conveyor-to-station transfers, supporting continuous and efficient movement of materials across production lines.

03 System Integration

Connects with ERP, MES, and WMS platforms to enable real-time coordination between production, warehouse, and logistics operations.

05 Efficiency Boost

Reduces manual labor and repetitive handling tasks, helping improve productivity, streamline workflows, and optimize manpower allocation.

02 Flexible Payload Handling

Supports a wide range of box sizes and weights, allowing the system to adapt easily to different material handling needs.

04 Smart Navigation

Uses advanced sensors to detect and avoid obstacles, ensuring safe and reliable movement in dynamic industrial environments.

06 Scalable Solution

Adaptable to different facility sizes and layouts, making it suitable for both current operational needs and future expansion.
